

Sports Results

Use the following API to retrieve sports results and sort into table of results. Each sport result contains several data and always includes the publication time.

Method: POST

Content-Type: application/json

Url: <https://ancient-wood-1161.getsandbox.com:443/results>

Tasks:

- Create python script that displays the sports results in reverse chronological order.
- Add a parameter to the script to display only certain types or events (e.g. f1Results)
- Add a parameter to set the locale (e.g. en)
- How can you confirm the code works?
- Bonus: Implement the rest call asynchronously
